To Whomever It May Concern:

We are very excited about this new collaboration between the University of Trento and Coe College. The research will focus on vanadate and molybdate glasses, and we will be responsible for the EXAFS and XRD measurements and their interpretation. This work will take advantage of the world class experience of the two groups, and it will also provide opportunities for undergraduate students to do research at the international level.

This exchange will be handled as a reciprocal arrangement, and we will cover hosting expenses when the Coe collaborators are in Italy. We have developed a schedule that will allow the students to experience a full immersion into the collaborating laboratory. The PI's will also build a meaningful relationship with visits and substantive discussions.

We fully support this proposal and look forward to the work enthusiastically.

Please contact us if you have any questions.

Sincerely

Giuseppe Dalba

A handwritten signature in blue ink that reads 'Giuseppe Dalba'.
