Cultural Appreciation Week Brings a Taste of Diversity to Coe Campus

Ayam Shrestha

The Diversity and Inclusion (DI) Collaboration organized multiple events during the past week as a part of its cultural appreciation week celebration. These were organized in an effort to offer Kohawks an opportunity to experience and learn about new cultures from across the globe.

The DI Collaboration is an inter-club group consisting of five different student organizations that includes the International Club, LatinX, Black Self Education Organization (BSEO), Multi-Cultural Fusion and the Asian American Club. It has been a tradition of these student organizations in the DI Collaboration to have this inter-club event in Spring Semester for the past three years.

As a part of the Cultural Appreciation Week for 2019, the Coe College international Club organized ‘Language Night’ on Monday evening at the Intercultural Centre where Kohawks could learn the basics of different languages from students coming from different parts of the world.

“Coe has a very diverse international community and often times when people get into their classes they don’t realize they are learning alongside people who adhere from a entirely different culture, speak a different language and come from a very different place,” stated Abhinav Shrestha

(‘19), president of the Coe College International Club. “Language Night is organized so that people who have a different native language can teach the basics of their language to others in a fun and interesting way. This is especially an amazing opportunity for students who want to go to study abroad or for those who have done study abroad as they can relate to stuff. Language, just like food and clothes and celebrations is culture so also gives people the opportunity to share each other’s culture.”

The languages being taught during Language Night included Spanish, Ngai, Japanese, Vietnamese, Hindi, Italian, Korean, French, Urdu, Nepali, and many more.

“It is amazing how we can find students who speak so many different language in a not so big college like Coe,” said Theo Lefevre, who hails from France. “Through Language Night, we were able to learn the basics of many different languages and I am interested to learn French just as I was trying to learn other languages. I would absolutely do it again.”

Similarly, LatinX organizes Bachata Night as a part of the Cultural Appreciation Week, Wednesday evening. Bachata is a form of Latin American dance that originated in the Dominican Republic. The club had an instructor at Coe to teach students the different dance moves associated with this traditional dance style. “The event is to provide cultural awareness about Latin American Culture to Coe and at the same time share our culture,” said LatinX founder, Larissa Alire (‘20), “Dance is a prominent aspect of Latino culture, and by sharing it with the rest of campus it will be a fun way to connect with other students on campus. I hope non Latino students will get a better understanding of our culture and want to engage with Latinx in the future.”

Kohawks came to the A/D Lobby to dance, learn about other cultures, and destress together. “It was a very nice experience to get a taste of culture,” said Sabrina Gallardo, after participating in the Bachata Dancing during the event. “I had been more into freestyle dancing before and Bachata is a completely new experience for me. I found it to be much more structural than what I am used to do.”

Students and Faculty Perform Together In Sinclair

Claudia Chiappa
Editor-in-chief

On Saturday, February 9, Coe Symphony Orchestra and Friends of Music at Coe presented the fourth annual Faculty and Friends of Music Concert. The concert, that took place in Sinclair Auditorium at 7 pm, brought students and faculty together in a unique performance for the community, and was followed by a free reception at the Clark Alumni House.

Assistant Professor of Music and Director of Orchestra Michelle Blair said that she pushed the school to start this tradition soon after coming to Coe, in fall 2015. She had seen concerts where faculty and students played together in other schools and wanted to see it happen at Coe too.

“It gives us the opportunity to feature our faculty performing alongside our students and combine them together as they work towards one goal,” said Dr. Blair. “It’s a collaboration compared to our usual teaching.”

The program featured three songs: *Tango in D*, a short tango piece by Isaac Albéniz, *Blackbird* a jazz version by Shelly Berg of the original Beatles song, and *Symphony No. 104* by Haydn. The choice of pieces is usually up to the conductor, but Dr. Blair said that the faculty soloist, who last Saturday was Assistant Professor of Music and Director of Jazz Band Steve Shanley, is always involved in the conversation.

Blackbird was the song that received the most success among the audience. While the original piece by McCartney comprises usually just vocal and guitar, Berg’s version was a jazz trio. Because of the nature of this concert - a collaboration between students and faculty - Shanley suggested having two students play the drums and bass. Blackbird therefore featured Shanley as piano soloist, Jeremiah de la Peña at the drumset, and Jonah Prall at the bass.

“For the audience it’s interesting to see us performing a symphony without a conductor,” said Dr. Blair. “It’s a different experience to see how we communicate and hopefully the audience also enjoys hearing the faculty and see the students rise to the occasion. For students, the value comes down to learning how to be leaders. They get to watch their teachers lead with confidence and they can learn to emulate them. Usually after this concert I always see a boost in students’ confidence.”

The Symphony Orchestra and faculty will repeat the concert next Thursday, February 28 at 7:30 pm at Kirkwood, in the Ballantyne auditorium. This concert, according to Dr. Blair, will be a way to celebrate the new transfer agreement signed between Coe’s Music Department and Kirkwood’s Music Program. The concert will be once again free and open to the public.
Birth Control May Soon Be Available Over the Counter

Non-prescription birth control (behind the counter) could soon be a reality for Iowans. During her last campaign, Republican Gov. Kim Reynolds stated that she supported widespread availability for birth control, as well as expanded resources for family planning.

Behind the counter birth control will be available to any woman so long as she is over the age of 18, and has completed a health assessment. This assessment would have to be done every two years so that women can continue to purchase birth control behind the counter. The assessment is needed to confirm that the birth control will be effective and safe to use, as well gain useful information for the woman’s general health.

This order will be able to give pharmacists the ability to authorize a yearlong supply of a variety of birth control options, all being able to be covered by insurance as if it was issued by a doctor as a prescription.

This proposal is set to hit legislation soon, and if implemented, there will be a statewide order to handle birth control behind the counter similarly to products that contain pseudoephedrine.

Coe Events

Tues, February 19 (4 pm)
Ann Struthers Student Reading Series, Hickok Hall

Tues, February 19 (6 pm)
Anthropology Program Presents: Three Years of Archaeological Discoveries at the Lechaion Harbor and Settlement Land Project, Greece (Hickok Hall)

Wed, February 20 (3 pm)
7 ± 2 Deadly Sins in Media Violence Research: Dr. Craig Anderson, Hickok Hall (Kesler)

Wednesday, February 20 (7 pm)
Global Warming and Human Violence: Dr. Craig Anderson, Hickok Hall (Kesler)

Thursday, February 21 - Saturday, February 23 (8 am - 9 pm)
Jazz Summit Festival
Faculty Profile: Ryan Baranowski

Professor Ryan Baranowski is one of the assistant professors in the Economics program in the Department of Business Administration and Economics. This is his sixth year teaching at Coe, however he has been here a bit longer than that. Baranowski is a Coe College alumni and he graduated in 2008. He even played on the Coe College Baseball team while he was a student. After graduating from Coe, Baranowski went on to get his Phd at University of California-Irvine. “The year I was on the market, the position opened up [at Coe] and I couldn’t pass up the opportunity to come back and be apart of the economics program,” said Baranowski. "I wanted to give back. The mentoring that I had when I was here really kinda helped push me in direction of the econ Phd and I wanted to do that limited to, a current events seminar, Money and Banking, Sports Analytics, and International Finance. When asked why he chose Coe, Baranowski really enjoy working with the Coe students ... and I currently work with the baseball team on some projects.” Like many people Baranowski had a few mentors. “My main mentor was probably Rick Eichhorn who was at Coe [when I was a student], and still is,” said Baranowski. “He had me do summer research...and I did that for two summers. He called me in and he said I think you have what it takes to get a Phd in economics. He said I think you can pursue a Phd, is that a direction you want to go and I said yeah. [So] he helped me through the process [and] that’s when I got into Irvine.” Baranowski’s advice to student is to “do as much as you can and do things you think you won’t like. Those will end up being some of the most valuable experiences. I went to Sweden, fall Junior semester...I got to travel throughout Europe when I was over there ... Try and take advantage of all the opportunities that Coe provides.”
Honeybees have been the subject of number-oriented research in the past. A study in 2018 determined that honeybees understand what the concept of zero is (a staggering discovery, as it was thought only humans could grasp the concept of nothing) and have the ability to count up to four. A new study this year tested whether the honeybees could perform simple mathematics problems.

Scientists trained 14 honeybees to link the colors blue and yellow as stand-ins for the symbols for addition and subtraction. Blue for addition, yellow for subtraction. These honeybees would then be shown a group of shapes inside simple ‘Y’ shaped mazes. At the end of each arm of the ‘Y’ would be one more shape or one less shape than the initial group of shapes at the start of the maze. Depending on the color of the shapes the bees would need to understand to add a shape or subtract a shape depending on the color.

During testing, the bees scored 63-72 % correctly consistently, which is much higher than what random chance would be. These bees did in fact know how to add and subtract.

While more studies need to be done, the research group that performed this is hopeful that this can help solve problems within quantum computing and artificial intelligence arrays.
Bremer Cup Win Pushes Men’s Tennis to 4-0

This past Friday, the Kohawk men’s tennis team welcomed the Cornell Rams and Division II’s Quincy University, advancing their record to 4-0 on the spring season.

Coe started their morning with a victory over Quincy by a dual score of 4-3. These matches were scored by Division II rules, with one team point awarded for each singles match win and one team point given for at least two wins in the doubles matches.

Quincy and Coe split the six matches played. At number one singles, Josh Pudlo ('19) got a victory, 6-2, 7-5. Nate Ackert ('19) followed with a victory of 7-5, 6-3 at No. 4 singles. Evgeny Pakhomenko ('19) secured a victory at No. 5 singles, 6-1, 6-2.

In order to beat Quincy, the Kohawks needed to secure at least two victories. The men answered the challenge by sweeping the double brackets to claim the 4-3 dual victory.

The duo of Ackert/ Pakhomenko had a 6-1 win at No. 2 doubles. Pudlo/Greiner were victorious at No. 1 doubles, 7-6 and Rami Hamedan ('22)/ Bo Wilson ('22) claimed a 7-5 win at No. 3 doubles.

Coe (4-0) welcomed NCAA Division I Missouri-Kansas City to Clark Racquet Center on Thursday. Later in the day, the Kohawks took on cross town rivals, the Cornell Rams. The Kohawks recorded wins in all nine matches against the Rams.

Nathan Grenier ('20) secured a victory in the No. 1 singles, followed by a victory from Rami Hamedan at No. 2 singles. Bo Wilson, Ben Hediger ('22), Nathan Meskell ('22), and Will Rizer ('21) all followed with singles victories of their own.

In doubles play, Greiner teamed with Pudlo for an 8-3 win at No. 1 doubles. Hamedan/Wilson at No. 2 and Hediger/Jon Lansing ('22) at No. 3 each won their matches by scores of 8-1.
Riots break out again, protestersors on tuesday began calling on president Nicolas Maduro to let humanitarian aid into the economically crippled country. This is following the riots three weeks ago when Guiado claimed Maduro’s election was not legitimate.

Protesters refuse to stop in Iran’s worst crack down on over a decade. Thousands are still speaking out against Iran’s corrupt government, bad economy, and soaring goof and oil prices, despite hundreds being arrested and dozens dying of “suspicious circumstances” in prison.

Nearly 100 children have died since the Ebola outbreak in the Democratic Republic of Congo started last year. According to Save the Children the crisis is gathering pace, with the number of new cases doubling last month.

The Australian government has lost control of the parliament for the first time in almost a century, losing a major vote on a bill to help evacuate critically ill refugees from offshore processing centers. The ruling Liberal National coalition was firmly opposed to the legislation, which it said would endanger national security, but it passed Australia’s lower house by a vote of 75 to 74.
what's HOT and what's NOT

Bandersnatch

A Choose Your Own Adventure movie was not how I thought I'd ring in the New Year, but nevertheless that is how my 2019 began. Black Mirror's “Bandersnatch” is a truly new experience, one that was rife with it's own twists and turns, and even if it isn't the best film on celluloid it is still a hell of a game to play with friends.

Set in the UK in 1984, programmer Stefan Butler (Fionn Whitehead) lives with his father (Craig Parkinson) while he tries developing a new CYOA game “Bandersnatch”, based off of the smash hit novel, for software company Tuckersoft. But as Stefan continually works on his code, he begins to realize that many of the choices he's making are...not his own. Whether he's being influenced by ancient god Pax, a shady corporation called PAC, or even by a being claiming to be from the future watching him through “Netflix”, it's the viewer's choice on whether Stefan finds success or ends up in a downward spiral towards insanity.

If I revealed more of the plot here, I'd be ruining the game for the rest of you. That's really what “Bandersnatch” is, a game; it's meant to be watched with multiple people and I recommend you do so. To judge it as a movie wouldn't be valid, since the 2 hour film I experienced could be different from the possible five hour film someone else watched. Simply put, I'll just say the acting is phenomenal and the settings/music is superb, and the multiple endings I anguished through with my friend Jared kept me on the edge of my seat.

**My Rating:**
You Decide

**Rotten Tomatoes:** 72 %
